Goaf Drainage Comments:

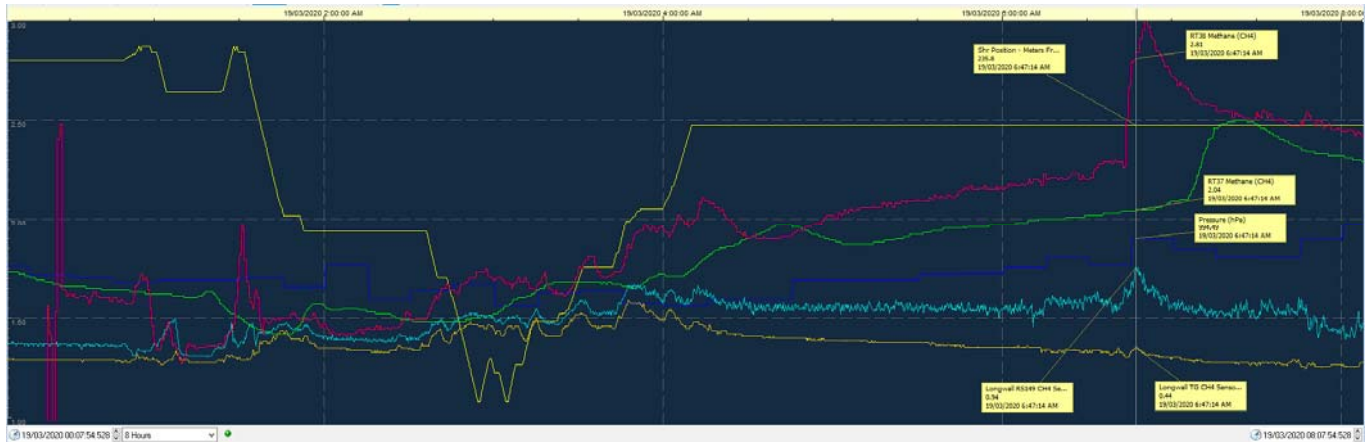

Goaf Skid GMS11 on Goaf Drainage Hole GR04V002A had been experiencing filter blockages up with fine material. This blockage has restricted the hole flow and contributed to the gas exceedance. The graph below shows the correlation between the hole flows and gas levels in the LW TG.

Going forward a dual skid will be set up on hole GR04V002A to allow cleaning of the filters without compromising goaf drainage.
